

Project Portfolio 4

Elegant Efficiency

Too many doorways in a kitchen often spell trouble for work flow and prep space. That was certainly the case in this 1980s rambler. The range hugged one wall. A corner tucked next to the fridge became a clutter-inspiring cave. And then there was the dining room. To get there, you had to bypass a narrow hallway, a bathroom and a closet.

This family needed improved traffic flow and a functional work triangle. And they wanted crisply clean cabinetry, warm wood floors, sleek granite countertops and a modern design flair. Murphy Bros. Designers and Remodelers were up to the task. Now the kitchen opens logically into the dining room and a spacious center island anchors the open floor plan. All of that enhanced by rich warm colors... Glorious!

Existing Floor Plan:

The badly placed powder room broke up the home, inhibiting flow

Dark spaces and dated materials in need of an update

New floor plan: Only 22 square feet were added, but the resulting space is dramatically improved

Newly remodeled space included white cabinets, black granite, with red walls that exclaimed "Wow!"
